

**ARC – ECT 2024 IDEP Work Plan**  
**Presented to: ARC Technical Committee – 3/5/24**

**Scope of Work**

ECT will follow up on the results from the 2023 investigations according to the Rouge River Collaborative IDEP Plan. This will include continuing to investigate suspicious discharges at Category A and B outfalls located in Beverly Hills, Novi, Dearborn Heights, and Livonia.

The planned investigations are outlined in Table 1.

**Table 1. Planned Investigations Summary for 2023**

<b>Community</b>	<b>Priority Outfalls</b>	<b>Next Steps</b>
Beverly Hills	BV51	Block off and sample sections of storm drain. Dye test homes
Livonia	L1619	Redo dye testing of car wash
Novi	NO20	Resample upstream of the school and dye test school
Dearborn Heights	OUT05SW001	Examine storm and sanitary drain maps, identify sampling location

ECT will contact the local community prior to the onset of fieldwork and provide periodic updates as warranted. The community may be requested to aid with traffic control and conduct CCTV work, if deemed necessary.

The output of this work plan is individual community summary reports with tables and maps showing the results of the inspections and sampling. The reports will also include recommendations for the next steps.

Additional IDEP work will be determined pending EGLE approval of the updated Collaborative IDEP Plan.

**Schedule:** January – December 2024

**Budget:** \$40,000
